

MISSING IN THE WATER

Sally's in trouble!

Without your help she may drown. Start at **dot 1** and draw a line to connect the dots to **dot 33** completing the missing help she needs.

When near shore or on a boat, wear your life jacket! Like Sally, you never know when you will need your life jacket. In the water your clothing becomes wet, very heavy and clumsy. It's very hard to put your life jacket on when you are in the water.

With permission, try the following experiment:

DRY 'N' LIGHT

WET 'N' HEAVY

WET 'N' WATER

In a bathtub or sink, compare the weight of a washcloth both wet (soaked) and dry. **Big difference!** Now compare the size of one of the washcloths to the size of your clothing. Then imagine trying to put a life jacket on while staying above water. **Seth** knows the difference!
